## METHOD OF TREATMENT USING HUMANIZED ANTI-CD11a ANTIBODIES

## **Abstract of the Disclosure**

Humanized anti-CD11a antibodies and various uses therefor are disclosed. The humanized anti-CD11a antibody may bind specifically to human CD11a I-domain, have an IC50(nM) value of no more than about 1nM for preventing adhesion of Jurkat cells to normal human epidermal keratinocytes expressing ICAM-1, and/or an IC50 (nM) value of no more than about 1nM in the mixed lymphocyte response assay.
